

# SN UDS10Wil

**SN UDS10Wil (SN Wilson)**<sup>[2]</sup> is a type Ia supernova, and as of April 2013, the farthest known.<sup>[3]</sup> It has a redshift of 1.914, which strongly implies that it exploded when the universe was about a third of its current size. It was discovered with the Hubble Space Telescope's Wide Field Camera 3.<sup>[1]</sup> The nickname SN Wilson is after the American President Woodrow Wilson.<sup>[4]</sup>
